

In the Specification

The following is a marked-up version of the specification with the language that is underlined (“ ”) being added and the language that contains strikethrough (“”) being deleted:

For the paragraph beginning at page 20, line 8:

The number of switched current sources 1000 also defines the number of control lines required for amplitude control circuit 802 to control controllable oscillator 1002. For example, if there are three switched current sources 1000 to be engaged or disengaged, amplitude control circuit 802 may use three control lines (one control line for each switched current source 1000). Amplitude control circuit 802 controls the operational state of controllable oscillator 1002 in the same manner as described above with respect to frequency control circuit 208.

Drawings

Please replace Figures 2 and 5 with the newly submitted figures attached herewith on separate sheets. Applicants have included marked-up sheets showing the amendments made to the figures.
